

SNOW DRAGON® SNOWMELTERS

SND900 MODEL

The Snow Dragon®, SND900 Model is designed for use at strip malls, schools and parking lots and is the ideal configuration for landscapers and contractors.

This model is rated at economically melting 240 cubic yards (183 cubic meters) of snow* per hour, or the equivalent of 12 to 14 tandem truckloads per hour.

This model is a commercially rugged unit fabricated on a tri-axle trailer and can be towed from site to site with a one-ton truck. Measuring twenty-five feet long and less than eight and a half feet wide, it is capable of fitting in tight places.

The SND900 has been engineered to be a low maintenance, easy to operate, and extremely mobile unit. The heated operating enclosure has two double doors on both sides for easy access. The heated enclosure protects the burner, fuel tanks, generator, water pump system as well as other major components from the weather elements. The control panel is also fabricated on the door so it can be accessed from the outside.

Easy access side loading, from both sides, is one feature with the SND900. The melting hopper tank measures a total of fifteen feet long with almost a ten-foot length (3.048 meters) area for dumping snow. Other features with this model include one-man operation capabilities, plug and play components, quiet operation, built-in lighting system, and visual and audible alarm indication.

Specifications:

- 240 cubic yard rated capacity per hour (183 m³/hr)
- Burner output at 9,000,000 Btu/hr
- No2 Fuel Oil or Diesel Fuel Type
- Fuel Consumption of 40-60 gallons/hr (151-227 liters/hr)
- Fuel Storage Capacity of 550 US Gallons (2082 liters)
- Measures 25' long x 8'4" wide x 8'6" high (7.62m x 2.54m x 2.59m)
