

SERIES 7

TRACKLESS VEHICLES LINE & STENCIL PAINTER

A parking lot is often the first place that pedestrians or visitors see when they arrive on a property, and they will greatly appreciate if it's freshly painted and well marked. Clear, neat parking lot lines and surface markings will instantly boost a property's appearance and ensure the safety of pedestrians and drivers.

The Trackless Paint & Stencil Painter attachment can be used for both straight line painting and stencil painting. For straight line painting, simply remove the cart, set up the spray gun and lay down a fresh line of paint. For stencil painting, retrieve a stencil from one of two stencil drawers and use the hand wand sprayer and a hose reel to paint the arrow, handicap symbol or any other symbol as required.

With attachments available for asphalt and concrete repair, sweeping, plowing and painting, a public works department equipped with a Trackless MT is more than capable of performing parking lot maintenance tasks which are often outsourced to property maintenance companies.
